

Fortune 500 expertise with a boutique focus

Mead Group Consulting develops business-driven technology solutions for Fortune 500 companies around the world, supporting every aspect of enterprise architecture, from networks to database design. We specialize in **rapid deployment** (“you had three months, now you’ve got three days”) and **business continuity** (“this can never, ever go down”). When we approach your issue, we start at your understanding of what you need, and translate it to effective tech.

We have spent decades talking with brilliant executives at the largest brands, often in very serious and immediate crisis. We have learned that the best way to help a company is to follow its understanding, rather than impose our own.

Our process includes talking with you about what you understand. We discuss your core business, diagram how your production process evolves, and not only learn from you how your business works, but also **capture the essential nature of the problem you are trying to solve; using your expertise, not our own.**

Then, we get to work translating the elements of what you’ve told us into technological terms, so that you can decide what outcome best prioritizes your needs and goals.

We do not believe that our job is to prove how little you know about technology, but rather to show how fast we can help you understand the problem, and then **help you determine the solution** you would build if you knew how.

With our long and proven history of delivering consulting services to some of the top companies around the world, our problem-solving experience is second to none. **Give us a call, we would be delighted to help.**

About The Mead Group

The Mead Group, a corporate technology business consulting company, includes:

Mead Group Consulting, which specializes in developing business-driven technology solutions;

ColoCenters, a leading colocation provider in the Pacific Northwest offering the highest compliance carrier and bandwidth neutral colocation in the most central location available; and

Nexis Response, a leader in physical and process driven business continuity.

Together, we have a 20-year history of working with some of the top companies around the world and we got there by first talking about business, translating technology into common language, and helping intelligent people make their own decisions about what should be done.
