

People Systems and Business made Safe

Nexis Response, a Mead Group Company, is the leader in providing comprehensive unified solutions across the full spectrum of emergency response, business continuity, disaster recovery, and crisis management for Fortune 500 companies. We design the plans, train your team, deliver the physical resources and maintain your program to make your employees safe, your site resilient, and your business secure against unplanned events.

Why Nexis?

Our Strategic Approach

We design metrics-driven 360-degree solutions that support your objectives, align to your specific risk profile and unify across plans, supply resources, deployment and training.

Flexible Customization

One-size does not fit all so understanding your risk profile and site objectives allows us to customize effective plans and supply resources that are unique to your situation.

Commitment to Quality

Our plans are strategic, clear and actionable. Plus, our supply resources are consistently higher quality than our competitors to ensure they are effective when it counts.

**EMERGENCIES DO NOT WAIT
FOR YOUR APPROVAL**

Our Services

Planning

Emergency Response:

Responding to an Emergency in the moment

We take the time to understand your site specifics to create an Emergency Response Plan that is actionable, straightforward, and supportive of your objectives, program maturity and company culture. By unifying existing or new plans, your response will be efficient and effective allowing you to meet critical life safety objectives and transition to recovery phases faster.

Business Continuity:

Continuing Business Operations when an event happens

A unified Business Continuity Plan further increases the effectiveness and timeliness of your recovery and return to operations. Building from a solid risk/threat assessment and business impact analysis, we provide clear and actionable plans to mitigate the impact of an event and meet your recovery time objectives.

Crisis Management:

How to communicate an event/crisis to all stakeholders

Effective crisis management and communications further support recovery efficiency and avoid creating a secondary crisis in stakeholder confidence. Awareness by the crisis management team across response and business continuity efforts makes them better prepared to make informed business decisions and better prepared to communicate effectively to all stakeholders. While the primary event can be devastating, a secondary crisis related to company reputation or ability to operate can be equally devastating so this preparation is key to effective mitigation.

Supply Resources

Design

Supplying resources and knowing how to use them are critical elements in protecting your employees and your site. Utilizing metrics and best practices, we design supply solutions that unify your response with the critical supply resources needed for emergency teams to carry out their tasks.

Deployment

Too often, supply resources are not incorporated into an emergency response plan. We provide the plans, orientation and training for your team to effectively use your supply resources.

Tracking

With our proprietary Inventory Tracking & Alert system (ITAS), we ensure your supplies and your team will be ready when you need them. We track supply resource expiration dates, emergency response team training and maintenance elements (specified table tops and exercises) of your emergency response program.

Training

Emergency Response and Business Continuity

Your teams need to be able to bring it all together during an event. We train your teams on the critical elements of your emergency response and business continuity plans from effective table tops through actual event response. We also provide task specific training for emergency response teams from basic first aid to more advanced site specific needs.

Supply Resource Deployment

We provide the orientation and training for your team to ensure they are aware of the tools and supplies you have, their location, the rationale and metrics for supply selection and considerations for setting up the functional support areas.

Employee and Home Personal Preparedness

When an event happens, along with your emergency response team, your employees need training as well. We provide online education resources and tools to assist them to get prepared at the office and at home, including discounts on kits and supplies to prepare their family.

About The Mead Group

The Mead Group, a corporate technology business consulting company, includes:

Mead Group Consulting, which specializes in developing business-driven technology solutions;

ColoCenters, a leading colocation provider in the Pacific Northwest offering the highest compliance carrier and bandwidth neutral colocation in the most central location available; and

Nexis Response, a leader in physical and process driven business continuity.

We have a 20-year history of working with some of the top companies around the world and we got there by first talking about business, translating technology into common language, and helping intelligent people make their own decisions about what should be done.
